SUMMARY

Product-focused Computer Science student with hands-on experience building and managing software products across fintech, fitness, and food-tech platforms. Experienced in product analytics, automation, and debugging production systems, with a track record of delivering user-focused features and operational improvements. Skilled at collaborating with engineers, translating business needs into technical solutions, and using data to optimize product performance.

EDUCATION

McPherson University
CGPA: 4.82.

October 2022 - July 2026
Computer Science
(B.Sc. Computer Science) in view

SKILLS

Product & Analytics: Product Strategy, Feature Development, MVP Development, Product Analytics, A/B Thinking, Roadmapping, Backlog Management.

Technical: Python, SQL, JavaScript, C, Java, React, API Integration

Tools: Jira, Notion, GitHub, VS Code, Google Analytics, Looker Studio

Data & Machine Learning: Data Analysis, Time-Series Modeling, TensorFlow/Keras, LSTM Models

Business & Operations: Financial Modeling, Workflow Automation, Market Research, Stakeholder Management

WORK EXPERIENCE

Final Year Project: PIML for LSTM-Based Gas Detection

March 2026 – Present

McPherson University

- Developed an LSTM-based predictive model for hazardous gas detection, achieving 98.12% accuracy on industrial sensor datasets.
- Preprocessed and analyzed time-series gas sensor data using Python and TensorFlow/Keras, building a full training and validation pipeline.
- Optimizing model performance and integrating predictions into a prototype monitoring system for early hazard detection.

Product Owner – FoodEase WhatsApp Bot

March 2026 – Present

Fusion Intelligence Technologies

- Architected a Python-based automation pipeline that processes raw Excel order logs, removes duplicate order IDs, and calculates daily commissions, reducing reporting time from 3 hours to 10 seconds.
- Built a Looker Studio dashboard connected to Google Sheets, automating nightly PDF performance reports for operational and financial monitoring.
- Developed a custom churn-tracking system using abandoned order IDs, enabling leadership to monitor daily drop-off rates and optimize the payment funnel.
- Automated revenue grouping and commission tracking for multiple restaurant partners, ensuring accurate financial reconciliation.

Product Associate – PFA Client (Pure Fitness Africa)

Oct 2025 – Feb 2026

Fusion Intelligence Technologies

- Implemented booking, purchase, payment, and class history features, improving transaction transparency and member activity tracking.
- Diagnosed and resolved a Paystack card authorization failure by correcting a misconfigured API endpoint and coordinating bank authorization requirements.
- Collaborated with backend engineers to implement refresh-token authentication, eliminating frequent user logouts and improving session reliability.

Product Management Intern – Pure Fitness Africa

March 2025 – Sept 2025

Fusion Intelligence Technologies

- Managed key app features including booking logic, admin card charging, OTP verification, and card management, supporting operations across two gym branches.
- Introduced manual “back-dated booking” functionality allowing staff to create in-person bookings while maintaining accurate system records.
- Investigated production issues using SQL queries, log analysis, and live system testing, resolving payment page bugs and signup error failures.

Co-founder & Operations Lead

April 2025 – Present

Diverse Labs

- Co-founded Diverse Labs, leading operations and project execution for tech products, including a virtual car showroom web demo with interactive 3D features.
- Oversaw cross-functional collaboration with 3D artists and developers to deliver a functional MVP within a month, demonstrating rapid prototyping and execution skills.
- Conducted user testing and feedback sessions, iterating on features to improve usability, engagement, and customer experience.
- Managed product documentation, workflows, and team coordination, ensuring clarity, accountability, and smooth scaling of operations.
- Directed overall project strategy, timelines, and resource allocation, contributing to the company’s early-stage growth and technical capability.

LEADERSHIP/CAMPUS ROLES

Cowrywise Campus Lead / Ambassador

October 2024 - Present

Cowryrise

- Organized seminars/workshops reaching 500+ students, driving a 40% increase in campus adoption.
- Expanded ambassadorship network and onboarded 100+ new users, growing Cowrywise’s student user base by 25%.

Cleva Campus Lead / Ambassador

April 2025 - Present

Cleva

- Drove adoption through info campaigns and peer sessions, engaging 200+ students across campus.
- Onboarded 50+ new users, contributing to a 20% growth in Cleva’s campus market share.

Product Management Intern

June 2024 - August 2024

McPherson University

- Led a team of 3 to lead the product development of a predictive model for wine quality testing, enhancing prediction accuracy by 15% over previous solutions.
- Conducted market and user research to guide the selection of the most efficient supervised learning algorithm, achieving a 20% reduction in computational time and optimizing product performance.
- Oversaw the design and implementation of a user-friendly interface, increasing usability and user engagement by 30%, ultimately driving adoption in a real-world setting

Executive Member, National Association of Computing Students (NACOS)

December 2023- June 2024

McPherson University

- Collaborated with the executive team to plan and execute events, workshops, and seminars, reaching over 500 students and increasing membership by 25%.
- Organized and hosted the departmental week, featuring:
 - Hackathon: Attracted 150 participants, with 30 teams competing.
 - Seminar: Welcomed 200 attendees, discussing industry trends and innovations.
 - Industrial visit: Led 50 students to a leading tech company, fostering networking opportunities.
- Successfully managed a team of 10 volunteers, ensuring seamless event execution.
